Hallawell's LAWN GRASS SEED

Hallawell's OWN FORMULA MIXTURES

Hallawell's offers only proven formula mixtures of lawn grass seeds. Thousands of home owners all over the country as well as in our own western states are enthusiastic users of our formula mixtures. Each one of the following serves a specific purpose, with equal success, and each contains only the best grade of seeds obtainable. With proper seeding, and care, any one of these formula mixtures will give you gratifying results.

MERION BLUE GRASS

A new deep rooted variety of blue grass which forms a dense turf and is considered a remarkable advance in grasses for lawn purposes. Because it is slow starting and might be smothered out by aggressive grasses we do not offer it in mixture but do recommend it highly for planting alone.

1 lb. of best grade Merion Seed will sow 750 sq. ft.

1 lb.\$6.75 5 lbs.\$32.50

Hallawell's LAWN CARPET

This is our prize blend of the finest leaved grasses for the most attractive lawn. It is dark velvety green—makes a good smooth turf, and when well established becomes a thick carpet-like lawn, which is not only beautiful, but serviceable as well. It grows in all sorts of soils and climates, from the cool coastal areas to the hot interior valleys, and always with gratifying results.

It has a fine, smooth, carpet-like surface right after mowing and maintains its fresh dark green color at all times. If you have time to take care of your lawn properly (and lawns do need care) LAWN CARPET MIXTURES will give you the kind of lawn of which you will be proud. Sow 1 lb. to 15x20 or 300 square feet.

Hallawell's EVERGREEN LAWN

This is our best "dual-purpose" lawn mixture. It is composed of moderately fine leaved grasses of upright habit of growth, grasses which will make a deep rooted turf and withstand the extremes of winter freezing or hot summers. The fine wiry leaves are rich dark green in color and make a very attractive front yard, and also have sufficient endurance for the hard usage of the backyard. It remains green throughout the year. If mowed at regular intervals and "dressed" occasionally it will make a very fine and attractive lawn. Sow 1 lb. to 10 x 20 ft., or 200 square feet.

HOW TO PLANT SEEDLINGS IN FLATS

All delicate plants such as Petunias, Stocks, Snapdragons, many vegetables like Tomatoes, Peppers, Cabbage, Celery, etc., and all perennials are best grown this way from seed. It saves time, and the resulting seedlings are huskier, ready to plant out sooner and often flower earlier than those from seed sown outdoors.

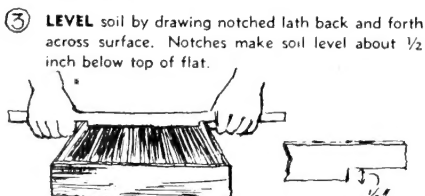

① DRAINAGE HOLES

Place pieces of broken flower pots to keep drainage holes open.

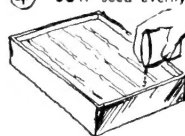

② **FILL** flat with soil made of equal parts of peat or leaf mold and garden loam and sand. With hand firm the soil around edges of flat.

③ **LEVEL** soil by drawing notched lath back and forth across surface. Notches make soil level about 1/2 inch below top of flat.

④ SOW

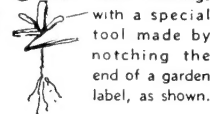

seed evenly either over the surface (broadcast) or in rows which can be marked with labels. Soak flat by standing in water until surface is wet.

⑤ LOOSEN

plants in flat with a putty knife or similar tool.

⑥ LIFT

little seedlings with a special tool made by notching the end of a garden label, as shown.

⑦ TRANSPLANT

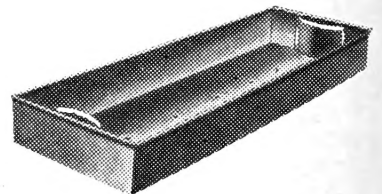

seedlings carefully in new flat of soil in hole made with a small dibble or pencil. Make holes 2 inches apart each way. Press soil firmly about the seedlings. Sprinkle with a fine spray of water.

When seedlings are growing vigorously transplant to the open ground in beds previously prepared by spading, working in fertilizer and raking smooth. Treat seedlings with Transplantone to reduce wilt.

CARE OF SEEDLINGS IN FLATS

When seeds in flats have sprouted move them to partial sun, then full sun, preferably out of doors. Fresh air and sunshine from the beginning will make strong healthy plants.

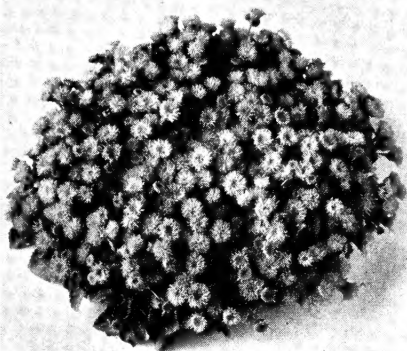

HALLAWELL'S SEED STARTER

New sub-irrigating seed starter for seeds and cuttings. One filling of water lasts about a week and supplies just the right amount of moisture for good germination. Tray is heavy galvanized steel 21x9 inches, 2 1/2 in. deep, painted green. Use a soil mixture of loam, leaf mold or peat moss and coarse sand. Keep in shade until seeds are sprouted, then move to sun. Do not keep over wet at any time.

SCATTER GARDEN MIXTURE

They come from all sections of the country, indicating that the mixture thrives and blooms in many different climates. It is a blend of bright showy annuals, dwarf, medium and tall giving a grand display in large areas where it would be difficult to intensely cultivate a garden. Left to themselves the vigorous, hardy annuals in this mixture will self-sow and probably become more or less permanent.

Set the plants 15 to 18 inches apart and pinch them back to force low branching. They may be pinched back a second time to induce more branching. The more branches, the more flowers, but of course the flowers will be smaller and probably more desirable for cutting.

To grow large blooms of the large flowering type requires disbranching, disbudding and other special culture which may be obtained from any good Chrysanthemum book. They do best when grown in the sun. Inferior blooms may result from too much shade.
